

How to install Simpleback

This document is (or should be) complete guide for installing Simpleback field processing code as a global package. If there are any errors please report them. Errors are valuable information.

1.

Install razorback processing and all needed packages. More info can be found from <https://github.com/BRGM/razorback>.

2.

Get Simpleback source code. Recommended way is to use git to pull code from DevOps repo: https://dev.azure.com/gtkfi/EM_geophysics/_git/Simpleback.

3.

Open Anaconda prompt or other console type program that can be used to install python packages with pip. If you are using environments activate an environment that has Razorback. In Anaconda this command `conda activate your_environment`

4.

Navigate to Simpleback source code. Command is `cd Your\folder\path`

5.

Install Simpleback running `pip install .` Note that this command may not work if you are inside GTK network.

6.

Test that installation worked by typing `python` and then `import Simpleback`. If there are no errors installation worked.

```
Anaconda Prompt (Anaconda3) - conda deactivate

(base) C:\Users\aharjule>conda activate razorback_pros

(razorback_pros) C:\Users\aharjule>cd C:\Users\aharjule\OneDrive - Valtori GTK\Documents\field processing\Simpleback

(razorback_pros) C:\Users\aharjule\OneDrive - Valtori GTK\Documents\field processing\Simpleback>pip install .

```

Image 1: This is how your Anaconda prompt should look like after running all commands from step 3 to step 6.

7.

Try that Simpleback graphical user interface. is working by running cell below. Note that you may need to restart kernel after installing new packages. Starting of the gui may take some time.

```
In [1]: import Simpleback.gui as sb_gui
sb_gui.use.gui()
```

8.

Start using Simpleback. Have fun! Remember to report all errors so developement of this code can be kept going.
